

SCIVOLA T

Lock for sliding doors

*With SCIVOLA T
the door closes, always!*

*Easy to install, wide tolerances between
hook and striker allow perfect closure,
in any case.*

The lock concept derives from SCIVOLA TT: the hook throws from the lock forend and rotate onto the striker plate when closing.

SCIVOLA T - Lock for sliding doors

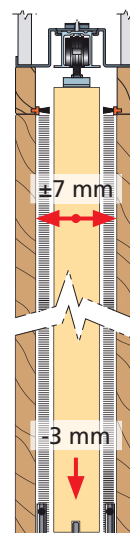

Closes, always!

The special movement of the hook and the considerable coupling tolerance with the stiker, make the door always close, even facing vertical settlements after the installation (up to 3 mm) and side shiftings up to 7 mm.

and precisely...

SCIVOLA T transmits a pleasant sensation of smoothness by moving the handle and the key, thanks to a great precision in the mechanical coupling and the smooth internal kinematics.

Fast and accurate installation

1 After the installation of the lock and the throw of the hook, by softly pushing the door against the jamb it is possible to centre the striker.

2 The striker installation has never been so simple: it just takes a milling of $\varnothing 25$ mm and a drill. Jigs are not required.

3 Thanks to the special shape, the covering tray is simply and precisely positioned onto the milling.

The patented head of the hook distinguishes for being sharpened. It works as a jig for marking the centre of the milling on the jamb for the striker housing.

In less than 1 minute it is possible to mount the striker reaching a valuable aesthetic result.

Available in the wide range of AGB finishes.

The lock is perfectly compatible with the millings made for SCIVOLA and SCIVOLA TT.
